

‘ft’ TAG
FLOW TROUGH TUB by TAG

The ‘ft’ TAG is a therapeutic soaking tub which brings the qualities of a natural hot springs into a spa or residential environment. Continual pure warm water flows onto your shoulders, relaxes your body, and vanishes at your feet.

The Experience

The tub is filled with pure, filtered (chlorine free) warm 100° water. The gentle curve of the front edge of the tub makes it easy to step into the tub and settle down into the ergonomic back, head, and arm rests. The temperature is adjusted to noticeably warmer 104 ° water which begins to gently cascade onto your shoulders. You feel the increased warmth of the water slowly move down your body. As the pure water continues to caress your shoulders you see it elegantly flow over the foot edge of the tub as it is drained away. Note: Temperatures can easily be adjusted for each user's preferences.

The Details

The electronic controls are wall mounted. The temperature can be set to one tenth of a degree. There are pre-programmed buttons for filling the tub and flow through operation.

All the valves and filters are housed inside the cavity of the tub. An easily removed access panel makes easy access for maintenance.

The temperature is controlled by an electronic valve which is accurate to one tenth of a degree.

The radial carbon water filters are capable of operating for 115,000 gallons of water or approximately 950 ten minute flow through therapeutic experiences.

A mechanical diverter valve mounted on the deck selects for the water to be sent to the tub fill or the flow through.

The FT TAG is 71 1/2” in length and is 43 1/8” wide. It is designed to be able to be retro-fit into the space of a previous 6’ 0” tub or fit new construction.

\$15,595 Includes the tub, all electronics, filters, as well as the exposed “bright work” (filler, diverter valve, overflow plate).

\$17,295 Includes all the features above and a 4-jet pipeless Sanijet system.
